Duni Dental Sticks (778092, 353830) - environmental properties

Duni dental sticks are made from FSC certified birch wood. The manufacturing is located in Europe.

Duni dental sticks are individually wrapped for hygienic reasons. The wrapping is made of tree fiber based cellophane which is from renewable material, and also certified for industrial and home composting.

We are actively working with our supplier to test wrap material that may meet criteria developed for marine biodegradability. Although we cannot yet say when this will be implemented, we are giving it our highest priority.

We wish to entreat our customers to recognize that compostable and marine biodegradable materials need to be handled in a responsible manner and that every care is taken to avoid littering the environment.

Best regards,

Elisabeth Gierow
CSR & Quality Director
